

PRACTICAL 2

Aim: Write and Execute SQL aggregation queries for data warehouse.

Q1. Find the total sales by country_id and channel_desc for the US and GB through the Internet and direct sales in September 2000 and October 2000 using ROLL-UP

Extension. The query should return the following:

- ☐ The aggregation rows that would be produced by GROUP BY ,
 - ☐ The First-level subtotals aggregating across country_id for each combination of channel_desc and calendar_month.
 - ☐ Second-level subtotals aggregating across calendar_month_desc and country_id for each channel_desc value.
 - ☐ A grand total row.
-

```
